AWRDS 2007v1.0.1 Release Notes

24 August 2007

Resolved Issues

- 1) **In Opstock, when D6Z Turn-In is generated, Nomen. Cuts off NSN (2934):** This bug applied to the D6Z Turn-in report generated in the Op Stock Module. The nomenclature field on the report was cutting off the last digit of the NSN.

- 2) **Refresh changes priority 02 to Priority 05 in the Work Order Grid (3004):** When a priority 02 record was selected in the Work Orders grid and the Faults window was opened and then closed, the Work Order grid would refresh and the priority for the selected records would be a priority 05. Opening and then closing the Faults window would refresh the Work Order grid again and the record would return to its 02 priority.

- 3) **SAMS Import does not display results (2987):** When the SAMS Import completed its processing, it did not display the records received. All the processing occurred correctly, however.
