AWRDS 2007v2.0.3 Release Notes

29 February 2008

AWRDS Capabilities

- 1) **TCMD Commodity Codes (SCR# 1509/#1538):** Within the TCMD module, the Commodity and Special Handling codes have been added to the T-Header tab for the “Without TCMD” and “Summary” windows for generic, ammo, and Hazmat items. The user now has the ability to enter or edit the Commodity and Special Handling codes for secondary items. These codes will be applied to secondary items only and will be disabled when the primary record in the T-Header tab has been selected.

The Commodity and Special Handling codes are now included in the WPS Export. During the WPS Export, the system will validate that the Commodity or Special Handling codes are populated for primary and secondary items. If the system finds missing or incomplete codes, the record will not be exported to WPS and the user will receive an information message informing them of the TCMD that has been rejected.
