

# AWRDS 2006v1.1.2 Release Notes

## AWRDS 2006v1.1.2 Release Notes 18 January 2007

---

### Release Overview

The 2006v1.1.2 patch release is designed to resolve existing issues to the AWRDS system. This patch is designed to be installed on the existing 2006v1.1.1 or 2006v1.1.0 release. The affected modules will include User Administration, Operational Stock, Document Register and the AWRDS Maintenance Workbench.

---

### Resolved Issues

- 1) **Error message when entering service data (2526/Japan 002):** When trying to enter and save new data in the Services tab the user would receive a “Catastrophic Failure” error message.
- 2) **Unable to update fields for existing users (2530/Korea 017):** When a current employee’s information was altered and saved the user would receive the error message “Employee ID numbers must be unique”. Selecting the <OK> button would cause the employee to be deleted. A cascade affect would follow, deleting any reference of that employee to maintenance performed and removing any man hours logged. *Note: When changing a User’s User ID, administrators must enter a default password or the user will not be able to access AWRDS on their subsequent logon.*
- 3) **Document Register ‘Due In’ field not getting updated (2516/Anaconda 053):** When ordering parts from Shop Stock the Due In field of the Document Register was not being updated to reflect the correct due in quantity.
